SERVICE AREAS

[Complex / Catastrophic](#)

[Product Liability](#)

[General Negligence](#)

[Business Litigation](#)

[School & University Liability](#)

[Toxic Tort](#)

Stephen P. Ellenbecker concentrates his practice in the areas of product liability, construction, and general civil litigation. He is co-chair of the Firm's Product Liability group and is co-chair of the Firm's Diversity & Inclusion Committee.

Mr. Ellenbecker also handles cases involving the food industry and welding industry. He has utilized bacterial genomic sequencing to defend foodborne outbreak litigation, and uses human genome sequencing to establish alternative causation and dispel notions of genetic susceptibility. In addition, he has researched, collaborated, and presented on the use of sequencing in the areas of toxicogenomics and pharmacogenomics, as well as the effects of genomic sequencing on the standard of care for medical providers.

He works on litigation as both local and national counsel and coordinates scheduling, discovery and trial work with national and local counsels, respectively.

He represents companies involved in the marine industry both for their marine products and mishaps at sea, including those involving Admiralty Law and the Jones Act. By example, Mr. Ellenbecker recently represented a towboat company in an occupational illness claim made by an employee under the Jones Act.

Additionally, Mr. Ellenbecker maintains a national product liability practice and also strategically handles and tries premises liability and commercial matters.
